COSC203 Assignment1 report

The aim of this report is to make a brief explanation of the function of the web-page (assignment1 for cosc203).

1 Site contain:

In this project, I have to create a webpage that displays all 68 specific details on birds, including their Māori, English, and scientific names, orders, families, and levels of conservation, along with the accompanying details about their colour, size, and other attributes. A handful of the birds' conservation status colours on my website aren't aligned for some reason.

2 Search Feature

When using a Māori, English, or scientific name, the search tool should provide information on birds. It should also be able to display different bird conservation levels and present the results in multiple ways, such as by length or weight. There isn't a glitch right now, and every feature operates as intended. Additionally, the search option allows you to look for birds by family and order, sorting them by weight (from lightest to harvest) or length (shortest to longest).
